

WEBSITE HOSTING & MAINTENANCE PLANS.

WHAT IS WEBSITE HOSTING?

Website hosting, in its simplest form, is giving your website real estate on the web so users can visit it.

For example, if your retail business wants a storefront, you need to rent space in a building. By paying a management company a monthly rent for space in their building, your business is able to sell merchandise.

Without paying for office space, your business is left homeless, and you're now selling your product out of your trunk (yikes, that's not a good look). Hosting is the same thing!

By hosting your site, you're paying for a virtual "storefront" so users can visit your website and interact with your company. Without hosting, your site isn't available for users to visit, which means less business for you.

Website hosting services also provide server support and security for your website. If the server that your site lives on goes down (i.e. the power goes out to your storefront), the website hosting service will work quickly to get your site online again. They'll also provide security to your site to help avoid hacks and other malicious activity.

WEBSITE HOSTING & MAINTENANCE PLANS.

WHAT IS WEBSITE MAINTENANCE?

Website maintenance is the work to keep your site fully operational and healthy. Many websites look great but fail to receive important updates over time, which can cause a lot of problems.

You can host your site with us, but if your site isn't being properly maintained, then issues are going to follow. All our websites are created on WordPress which means you'll need to be sure that the WordPress version, theme, plugins, and code are kept up-to-date so your site operates properly and is secure.

If any of these items are ignored, your site could face a whole host of issues, from design flaws to fatal errors, causing you to lose customers. Some of this can be done with limited WordPress knowledge; however, we don't recommend it.

WordPress and the plugins used on websites change often, and we stay up-to-date on new changes and how they affect our customers. This allows us to be proactive instead of reactive, keeping our customer's websites looking great and operating with excellence.

Regular maintenance ensures your business can stay open and operate fully without major disruptions.

Of course, you can try to go the DIY route, but that tends to only work for so long. You have a business to run, and you shouldn't have to worry about your website. That's why we highly recommend both hosting your site with us and enrolling your website in a maintenance plan, so everything continues to operate smoothly.

WEBSITE HOSTING PLANS.

Basic WordPress Plan

- WordPress optimised
- 1 website
- 5GB blazing fast SSD storage
- 4 free business email accounts
- Unlimited premium bandwidth
- Hourly cronjobs backups
- SSL security encryption
